

**NAME**

**v8** — Google’s JavaScript engine

**SYNOPSIS**

**shell** [*options*] [--**shell**] [*file* ...]

**d8** [*options*] [--**e** *string*] [--**shell**] [--**module**] [*file*...]

**OPTIONS**

-- Capture all remaining arguments in JavaScript.

--**e** *string*

Execute *string* in V8.

--**shell**

Run an interactive JavaScript shell.

--**help**

Print flags and usage message to stdout, then exit.

--**module**

Execute *file* as a JavaScript module.

Note: the --**module** option is implicitly enabled for \*.mjs files.

**V8 FLAGS**

Option names beginning with “no-” pertain to a boolean V8 flag enabled by default.

--**abort-on-uncaught-exception**

Abort program (dump core) when an uncaught exception is thrown.

--**no-allocation-site-pretenuing**

Don’t pretenu with allocation sites.

--**allow-natives-syntax**

Allow natives syntax.

--**allow-unsafe-function-constructor**

Allow invoking the function constructor without security checks.

--**always-compact**

Perform compaction on every full GC.

--**always-opt**

Always try to optimize functions.

--**always-osr**

Always try to OSR functions.

--**no-analyze-environment-liveness**

Don’t analyze liveness of environment slots and zap dead values.

--**arm-arch**

**Type:** String

**Default:** “armv8”

Generate instructions for the selected ARM architecture if available: armv6, armv7, armv7+sudiv or armv8.

**--asm-wasm-lazy-compilation**

Enable lazy compilation for asm-wasm modules.

**--assert-types**

Generate runtime type assertions to test the typer.

**--assume-asmjs-origin**

Force WASM decoder to assume input is internal asm-wasm format.

**--no-async-stack-traces**

Exclude async stack traces in `Error.stack`. (<https://mdn.io/Error.stack>)

**--block-concurrent-recompilation**

Block queued jobs until released.

**--budget-for-feedback-vector-allocation**

**Type:** Int

**Default:** 1024

The budget in amount of bytecode executed by a function before we decide to allocate feedback vectors.

**--builtins-in-stack-traces**

Show built-in functions in stack traces.

**--no-cache-prototype-transitions**

Don't cache prototype transitions.

**--check-icache**

Check icache flushes in ARM and MIPS simulator.

**--clear-exceptions-on-js-entry**

Clear pending exceptions when entering JavaScript.

**--clear-free-memory**

Initialize free memory with 0.

**--code-comments**

Emit comments in code disassembly; for more readable source positions you should add `--no-concurrent-recompilation`.

**--no-compact-code-space**

Don't compact code space on full collections.

- no-compilation-cache**  
Disable compilation cache.
- compiler-dispatcher**  
Enable compiler dispatcher.
- no-concurrent-array-buffer-freeing**  
Don't free array buffer allocations on a background thread.
- concurrent-inlining**  
Run optimizing compiler's inlining phase on a separate thread.
- no-concurrent-marking**  
Don't use concurrent marking.
- no-concurrent-recompilation**  
Force synchronous optimisation of hot functions.
- concurrent-recompilation-delay**  
**Type:** Int  
**Default:** 0  
  
Artificial compilation delay in ms.
- concurrent-recompilation-queue-length**  
**Type:** Int  
**Default:** 8  
  
The length of the concurrent compilation queue.
- no-concurrent-store-buffer**  
Don't use concurrent store buffer processing.
- no-concurrent-sweeping**  
Don't use concurrent sweeping.
- correctness-fuzzer-suppressions**  
Suppress certain unspecified behaviours to ease correctness fuzzing: abort program when the stack overflows or a string exceeds maximum length (as opposed to throwing `RangeError`), [⟨https://mdn.io/RangeError⟩](https://mdn.io/RangeError), and use a fixed suppression string for error messages.
- cpu-profiler-sampling-interval**  
**Type:** Int  
**Default:** 1000  
  
CPU profiler sampling interval in microseconds.
- csa-trap-on-node**  
**Type:** String  
**Default:** NULL

Trigger break point when a node with given id is created in given stub. The format is:Stub-Name,NodeId.

**--debug-code**

Generate extra code (assertions) for debugging.

**--debug-sim**

Enable debugging the simulator.

**--deopt-every-n-times**

**Type:** Int

**Default:** 0

Deoptimize every n times a deopt point is passed.

**--detailed-error-stack-trace**

Include arguments for each function call in the error stack frames array.

**--detailed-line-info**

Always generate detailed line information for CPU profiling.

**--no-detect-ineffective-gcs-near-heap-limit**

Don't trigger out-of-memory failure to avoid GC storm near heap limit.

**--disable-abortjs**

Disable AbortJS runtime function.

**--disable-old-api-accessors**

Disable old-style API accessors whose setters trigger through the prototype chain.

**--disallow-code-generation-from-strings**

Disallow eval and friends.

**--dump-counters**

Dump counters on exit.

**--dump-counters-nvp**

Dump counters as name-value pairs on exit.

**--dump-wasm-module-path**

**Type:** String

**Default:** NULL

Directory to dump WASM modules to.

**--embedded-src**

**Type:** String

**Default:** NULL

Path for the generated embedded data file. (mksnapshot only).

**--embedded-variant**

**Type:** String

**Default:** NULL

Label to disambiguate symbols in embedded data file. (mksnapshot only).

**--enable-32dregs**

**Type:** maybe\_bool

**Default:** unset

Deprecated (use --arm-arch instead).

**--enable-armv7**

**Type:** maybe\_bool

**Default:** unset

Deprecated (use --arm-arch instead).

**--enable-armv8**

**Type:** maybe\_bool

**Default:** unset

Deprecated (use --arm-arch instead).

**--no-enable-avx**

Disable use of AVX instructions if available.

**--no-enable-bmi1**

Disable use of BMI1 instructions if available.

**--no-enable-bmi2**

Disable use of BMI2 instructions if available.

**--no-enable-fma3**

Disable use of FMA3 instructions if available.

**--no-enable-lazy-source-positions**

Don't skip generating source positions during initial compile, but regenerate when actually required.

**--no-enable-lzcnt**

Disable use of LZCNT instruction if available.

**--enable-neon**

**Type:** maybe\_bool

**Default:** unset

Deprecated (use --arm-arch instead).

**--no-enable-one-shot-optimization**

Disable size optimizations for the code that will only be executed once.

**--no-enable-popcnt**

Disable use of POPCNT instruction if available.

**--no-enable-regexp-unaligned-accesses**

Disable unaligned accesses for the regexp engine.

**--no-enable-sahf**

Disable use of SAHF instruction if available (X64 only).

**--enable-source-at-csa-bind**

Include source information in the binary at CSA bind locations.

**--no-enable-sse3**

Disable use of SSE3 instructions if available.

**--no-enable-sse4-1**

Disable use of SSE4.1 instructions if available.

**--no-enable-sse4-2**

Disable use of SSE4.2 instructions if available.

**--no-enable-ssse3**

Disable use of SSSE3 instructions if available.

**--enable-sudiv**

**Type:** maybe\_bool

**Default:** unset

Deprecated (use --arm-arch instead).

**--enable-vfp3**

**Type:** maybe\_bool

**Default:** unset

Deprecated (use --arm-arch instead).

**--ephemeron-fixpoint-iterations**

**Type:** Int

**Default:** 10

Number of fixpoint iterations it takes to switch to linear ephemeron algorithm.

**--es-staging**

**Internal use only.**

Enable test-worthy Harmony features.

- no-experimental-inline-promise-constructor**  
Don't inline the `Promise` [⟨https://mdn.io/Promise⟩](https://mdn.io/Promise) constructor in TurboFan.
- experimental-new-space-growth-heuristic**  
Grow the new space based on the percentage of survivors instead of their absolute value.
- experimental-stack-trace-frames**  
Enable experimental frames (API/Builtins) and stack trace layout.
- experimental-wasm-anyref**  
Enable prototype anyref opcodes for WASM.
- experimental-wasm-bigint**  
Enable prototype JS `BigInt` [⟨https://mdn.io/BigInt⟩](https://mdn.io/BigInt) support for WASM.
- no-experimental-wasm-bulk-memory**  
Disable prototype bulk memory opcodes for WASM.
- experimental-wasm-compilation-hints**  
Enable prototype compilation hints section for WASM.
- experimental-wasm-eh**  
Enable prototype exception handling opcodes for WASM.
- experimental-wasm-mv**  
Enable prototype multi-value support for WASM.
- experimental-wasm-return-call**  
Enable prototype return call opcodes for WASM.
- no-experimental-wasm-sat-f2i-conversions**  
Disable prototype saturating float conversion opcodes for WASM.
- no-experimental-wasm-se**  
Disable prototype sign extension opcodes for WASM.
- experimental-wasm-simd**  
Enable prototype SIMD opcodes for WASM.
- experimental-wasm-threads**  
Enable prototype thread opcodes for WASM.
- experimental-wasm-type-reflection**  
Enable prototype WASM type reflection in JS for WASM.
- expose-async-hooks**  
Expose `async_hooks` object.

**--expose-cputracemark-as****Type:** String**Default:** NULL

Expose `cputracemark` extension under the specified name.

**--expose-externalize-string**

Expose `externalize string` extension.

**--expose-free-buffer**

Expose `freeBuffer` extension.

**--expose-gc**

Expose `gc` extension.

**--expose-gc-as****Type:** String**Default:** NULL

Expose `gc` extension under the specified name.

**--expose-inspector-scripts**

Expose `injected-script-source.js` for debugging.

**--expose-trigger-failure**

Expose `trigger-failure` extension.

**--no-expose-wasm**

Don't expose WASM interface to JavaScript.

**--no-fast-math**

Don't enable faster, potentially less accurate, math functions.

**--fast-promotion-new-space**

Fast promote new space on high survival rates.

**--feedback-normalization**

Feed back normalization to constructors.

**--no-flush-bytecode**

Don't flush bytecode that hasn't executed recently.

**--force-long-branches**

Force all emitted branches to be in long mode (MIPS/PPC only).

**--force-marking-deque-overflows**

Force overflows of marking deque by reducing its size to 64 words.

**--force-slow-path**

Always take the slow path for builtins.

**--frame-count**

**Type:** Int

**Default:** 1

Number of stack frames inspected by the profiler.

**--function-context-specialization**

Enable function context specialization in TurboFan.

**--future**

Implies all staged features that we want to ship in the not-too-far future.

**--fuzzer-gc-analysis**

Print number of allocations and enable analysis mode for GC fuzz-testing, e.g. `--stress-marking`, `--stress-scavenge`.

**--fuzzer-random-seed**

**Type:** Int

**Default:** 0

Default seed for initializing fuzzer random generator (0, the default, means to use v8's random number generator seed).

**--gc-experiment-background-schedule**

Use new background GC schedule heuristics.

**--gc-experiment-less-compaction**

Use less compaction in non-memory reducing mode.

**--gc-fake-mmap**

**Type:** String

**Default:** `" /tmp/___v8_gc__"`

Specify the name of the file for fake gc mmap used in `ll_prof`.

**--gc-freelist-strategy**

**Type:** Int

**Default:** 5

Freelist strategy to use. Supported values and their meanings are:

0	FreeListLegacy
1	FreeListFastAlloc
2	FreeListMany
3	FreeListManyCached
4	FreeListManyCachedFastPath
5	FreeListManyCachedOrigin

- gc-global**  
Always perform global GCs.
- gc-interval**  
**Type:** Int  
**Default:** -1  
  
Garbage collect after *N* allocations.
- gc-stats**  
**Type:** Int  
**Default:** 0  
  
Used by tracing internally to enable gc statistics.
- gdbjit**  
Enable GDBJIT interface.
- gdbjit-dump**  
Dump ELF objects with debug info to disk.
- gdbjit-dump-filter**  
Dump only objects containing this substring.
- gdbjit-full**  
Enable GDBJIT interface for all code objects.
- no-global-gc-scheduling**  
Disable GC scheduling based on global memory.
- no-hard-abort**  
Don't abort by crashing.
- harmony**  
Enable all completed Harmony features.
- no-harmony-dynamic-import**  
Disable dynamic import.
- no-harmony-import-meta**  
Disable `import.meta` (<https://mdn.io/import.meta>) property.
- harmony-intl-add-calendar-numbering-system**  
Add `calendar` and `numberingSystem` to `DateTimeFormat`.  
(<https://mdn.io/DateTimeFormat>)
- no-harmony-intl-bigint**  
Disable `BigInt.prototype.toLocaleString`.  
(<https://mdn.io/BigInt.prototype.toLocaleString>)

**--no-harmony-intl-date-format-range**

Disable `DateTimeFormat.formatRange`. [⟨https://mdn.io/DateTimeFormat.formatRange⟩](https://mdn.io/DateTimeFormat.formatRange)

**--harmony-intl-dateformat-day-period**

Add `dayPeriod` option to `DateTimeFormat`. [⟨https://mdn.io/DateTimeFormat⟩](https://mdn.io/DateTimeFormat)

**--harmony-intl-dateformat-fractional-second-digits**

Add `fractionalSecondDigits` option to `DateTimeFormat`.  
[⟨https://mdn.io/DateTimeFormat⟩](https://mdn.io/DateTimeFormat)

**--harmony-intl-dateformat-quarter**

**In progress.**

Add `quarter` option to `DateTimeFormat`. [⟨https://mdn.io/DateTimeFormat⟩](https://mdn.io/DateTimeFormat)

**--no-harmony-intl-datetime-style**

Disable `dateStyle` and `timeStyle` for `DateTimeFormat`.  
[⟨https://mdn.io/DateTimeFormat⟩](https://mdn.io/DateTimeFormat)

**--no-harmony-intl-numberformat-unified**

Disable unified `Intl.NumberFormat` [⟨https://mdn.io/Intl.NumberFormat⟩](https://mdn.io/Intl.NumberFormat) features.

**--harmony-intl-segmenter**

Enable `Intl.Segmenter`. [⟨https://mdn.io/Intl.Segmenter⟩](https://mdn.io/Intl.Segmenter)

**--no-harmony-namespace-exports**

Disable namespace exports (`export * as foo from "bar"`).

**--harmony-nullish**

**In progress.**

Enable nullish operator.

**--harmony-optional-chaining**

**In progress.**

Enable optional chaining syntax.

**--harmony-private-methods**

**In progress.**

Enable private methods in class literals.

**--no-harmony-promise-all-settled**

Disable `Promise.allSettled`. [⟨https://mdn.io/Promise.allSettled⟩](https://mdn.io/Promise.allSettled)

**--harmony-regexp-sequence**

**In progress.**

Enable `RegExp` Unicode sequence properties.

**--no-harmony-sharedarraybuffer**

Disable `SharedArrayBuffer`. [⟨https://mdn.io/SharedArrayBuffer⟩](https://mdn.io/SharedArrayBuffer)

**--no-harmony-shipping**

Disable all shipped Harmony features.

**--harmony-weak-refs**

**In progress.**

Enable weak references.

**--hash-seed**

**Type:** Uint64

**Default:** 0

Fixed seed to use to hash property keys (0 means random). With snapshots this option cannot override the baked-in seed.

**--heap-growing-percent**

**Type:** Int

**Default:** 0

Specifies heap growing factor as  $(1 + \text{heap\_growing\_percent} / 100)$ .

**--heap-profiler-trace-objects**

Dump heap object allocations/movements/size\_updates.

**--no-heap-profiler-use-embedder-graph**

Don't use the new EmbedderGraph API to get embedder nodes.

**--heap-snapshot-string-limit**

**Type:** Int

**Default:** 1024

Truncate strings to this length in the heap snapshot.

**--histogram-interval**

**Type:** Int

**Default:** 600000

Time interval in ms for aggregating memory histograms.

**--huge-max-old-generation-size**

Increase maximum size of the old space to 4 GB for x64 systems with the physical memory bigger than 16 GB.

**--no-icu-timezone-data**

Don't get information about timezones from ICU.

**--no-idle-time-scavenge**

Don't perform scavenges in idle time.

**--no-ignition-elide-noneffectful-bytecodes**

Don't elide bytecodes which won't have any external effect.

**--no-ignition-filter-expression-positions**

Don't filter expression positions before the bytecode pipeline.

**--no-ignition-reo**

Don't use ignition register equivalence optimizer.

**--no-ignition-share-named-property-feedback**

Don't share feedback slots when loading the same named property from the same object.

**--ignore-asm-unimplemented-break**

Don't break for ASM\_UNIMPLEMENTED\_BREAK macros.

**--no-incremental-marking**

Don't use incremental marking.

**--no-incremental-marking-wrappers**

Don't use incremental marking for marking wrappers.

**--initial-heap-size**

**Type:** size\_t

**Default:** 0

Initial size of the heap (in MBytes).

**--initial-old-space-size**

**Type:** size\_t

**Default:** 0

Initial old space size (in MBytes).

**--no-inline-accessors**

Don't inline JavaScript accessors.

**--no-inline-new**

Don't use fast inline allocation.

**--interpreted-frames-native-stack**

Show interpreted frames on the native stack (useful for external profilers).

**--interrupt-budget**

**Type:** Int

**Default:** 147456

Interrupt budget which should be used for the profiler counter.

**--jitless**

Disable runtime allocation of executable memory.

**--no-lazy**

Don't use lazy compilation.

**--no-lazy-feedback-allocation**

Don't allocate feedback vectors lazily.

**--liftoff**

Enable Liftoff, the baseline compiler for WebAssembly.

**--lite-mode**

Enable trade-off of performance for memory savings.

**--ll-prof**

Enable low-level Linux profiler.

**--log** Minimal logging (no API, code, GC, suspect, or handles samples).

**--log-all**

Log all events to the log file.

**--log-api**

Log API events to the log file.

**--log-code**

Log code events to the log file without profiling.

**--no-log-colour**

Don't use coloured output when logging.

**--log-function-events**

Log function events (parse, compile, execute) separately.

**--log-handles**

Log global handle events.

**--log-instruction-file**

**Type:** String

**Default:** "arm64\_inst.csv"

AArch64 instruction statistics log file.

**--log-instruction-period**

**Type:** Int  
**Default:** 4194304

AArch64 instruction statistics logging period.

**--log-instruction-stats**

Log AArch64 instruction statistics.

**--log-internal-timer-events**

Time internal events.

**--log-source-code**

Log source code.

**--log-suspect**

Log suspect operations.

**--logfile**

**Type:** String  
**Default:** "v8.log"

Specify the name of the log file.

**--no-logfile-per-isolate**

Use a single log-file for each isolate.

**--manual-evacuation-candidates-selection**

Test mode only flag. It allows a unit test to select evacuation candidates pages (requires `--stress-compaction`).

**--map-counters**

Map counters to a file.

**--max-heap-size**

**Type:** size\_t  
**Default:** 0

Maximum size of the heap (in MBytes). Both `--max-semi-space-size` and `--max-old-space-size` take precedence. All three flags cannot be specified at the same time.

**--max-inlined-bytecode-size**

**Type:** Int  
**Default:** 500

Maximum size of bytecode for a single inlining.

**--max-inlined-bytecode-size-absolute**

**Type:** Int  
**Default:** 5000

Maximum cumulative size of bytecode considered for inlining.

**--max-inlined-bytecode-size-cumulative**

**Type:** Int

**Default:** 1000

Maximum cumulative size of bytecode considered for inlining.

**--max-inlined-bytecode-size-small**

**Type:** Int

**Default:** 30

Maximum size of bytecode considered for small function inlining.

**--max-lazy**

Ignore eager compilation hints.

**--max-old-space-size**

**Type:** size\_t

**Default:** 0

Maximum size of the old space (in MBytes).

**--max-optimized-bytecode-size**

**Type:** Int

**Default:** 61440

Maximum bytecode size to be considered for optimization; too high values may cause the compiler to hit (release) assertions.

**--max-polymorphic-map-count**

**Type:** Int

**Default:** 4

Maximum number of maps to track in POLYMORPHIC state.

**--max-semi-space-size**

**Type:** size\_t

**Default:** 0

Maximum size of a semi-space (in MBytes), the new space consists of two semi-spaces.

**--max-stack-trace-source-length**

**Type:** Int

**Default:** 300

Maximum length of function source code printed in a stack trace.

**--mcpu**

**Type:** String

**Default:** "auto"

Enable optimisation for a specific CPU.

**--no-memory-reducer**

Don't use memory reducer.

**--no-memory-reducer-for-small-heaps**

Don't use memory reducer for small heaps.

**--min-inlining-frequency**

**Type:** Float

**Default:** 0.15

Minimum frequency for inlining.

**--min-semi-space-size**

**Type:** size\_t

**Default:** 0

Minimum size of a semi-space (in MBytes), the new space consists of two semi-spaces.

**--minor-mc**

Perform young generation mark compact GCs.

**--no-minor-mc-parallel-marking**

Don't use parallel marking for the young generation.

**--mock-arraybuffer-allocator**

Use a mock `ArrayBuffer` <https://mdn.io/ArrayBuffer> allocator for testing.

**--mock-arraybuffer-allocator-limit**

**Type:** size\_t

**Default:** 0

Memory limit for mock `ArrayBuffer` <https://mdn.io/ArrayBuffer> allocator used to simulate OOM for testing.

**--no-modify-field-representation-inplace**

Disable in-place field representation updates.

**--no-move-object-start**

Disable moving of object starts.

**--native-code-counters**

Generate extra code for manipulating stats counters.

**--never-compact**

**Testing only.**

Never perform compaction on full GC.

**--no-opt**

Don't use adaptive optimizations.

**--optimize-for-size**

Enable optimisations which favour memory size over execution speed.

**--no-page-promotion**

Don't promote pages based on utilization.

**--page-promotion-threshold**

**Type:** Int

**Default:** 70

Minimum percentage of live bytes on a page to enable fast evacuation.

**--no-parallel-compaction**

Don't use parallel compaction.

**--parallel-compile-tasks**

Enable parallel compile tasks.

**--no-parallel-marking**

Don't use parallel marking in atomic pause.

**--no-parallel-pointer-update**

Don't use parallel pointer update during compaction.

**--no-parallel-scavenge**

Disable parallel scavenging.

**--parse-only**

Only parse the sources.

**--no-partial-constant-pool**

Disable use of partial constant pools (X64 only).

**--perf-basic-prof**

Enable perf Linux profiler (basic support).

**--perf-basic-prof-only-functions**

Only report function code ranges to perf (i.e. no stubs).

**--perf-prof**

Enable perf Linux profiler (experimental annotate support).

**--perf-prof-annotate-wasm**

Load WASM source-map and provide annotate support when used with `--perf-prof` (experimental).

- perf-prof-unwinding-info**  
Enable unwinding info for perf Linux profiler (experimental).
- no-polymorphic-inlining**  
Disable polymorphic inlining.
- predictable**  
Enable predictable mode.
- predictable-gc-schedule**  
Predictable garbage collection schedule. Fixes heap growing, idle, and memory reducing behavior.
- prepare-always-opt**  
Prepare for turning on always opt.
- print-all-exceptions**  
Print exception object and stack trace on each thrown exception.
- print-bytecode**  
Print bytecode generated by ignition interpreter.
- print-bytecode-filter**  
**Type:** String  
**Default:** "\*"   
  
Filter for selecting which functions to print bytecode.
- print-deopt-stress**  
Print number of possible deopt points.
- print-opt-source**  
Print source code of optimized and inlined functions.
- print-wasm-code**  
Print WebAssembly code.
- print-wasm-stub-code**  
Print WebAssembly stub code.
- prof**  
Log statistical profiling information (implies --log-code).
- no-prof-browser-mode**  
Turn off browser-compatible mode when profiling with --prof.
- prof-cpp**  
Like --prof, but ignore generated code.

**--prof-sampling-interval****Type:** Int**Default:** 1000

Interval for `--prof` samples (in microseconds).

**--profile-deserialization**

Print the time it takes to deserialize the snapshot.

**--random-gc-interval****Type:** Int**Default:** 0

Collect garbage after **random**( 0 , X) allocations. It overrides `--gc-interval`.

**--random-seed****Type:** Int**Default:** 0

Default seed for initializing random generator (0, the default, means to use system random).

**--no-randomize-hashes**

Don't randomize hashes to avoid predictable hash collisions (with snapshots this option cannot override the baked-in seed).

**--redirect-code-traces**

Output deopt information and disassembly into file "*code-pid-isolate-id.asm*."

**--redirect-code-traces-to****Type:** String**Default:** NULL

Output deopt information and disassembly into the given file.

**--regexp-interpret-all**

Interpret all regexp code.

**--regexp-mode-modifiers**

Enable inline flags in regexp.

**--no-regexp-optimization**

Don't generate optimized regexp code.

**--regexp-tier-up**

Enable regexp interpreter and tier up to the compiler.

**--no-rehash-snapshot**

Don't rehash strings from the snapshot to override the baked-in seed.

**--reserve-inline-budget-scale-factor****Type:** Float**Default:** 1 . 2

Maximum cumulative size of bytecode considered for inlining.

**--retain-maps-for-n-gc****Type:** Int**Default:** 2

Keeps maps alive for  $N$  old space garbage collections.

**--runtime-call-stats**

Report runtime call counts and times.

**--sampling-heap-profiler-suppress-randomness**

Use constant sample intervals to eliminate test flakiness.

**--no-script-streaming**

Disable parsing on background.

**--semi-space-growth-factor****Type:** Int**Default:** 2

Factor by which to grow the new space.

**--serialization-chunk-size****Type:** UInt**Default:** 4096

Custom size for serialization chunks.

**--serialization-statistics**

Collect statistics on serialized objects.

**--sim-stack-alignment****Type:** Int**Default:** 8

Stack alignment in bytes in simulator (4 or 8, 8 is default).

**--sim-stack-size****Type:** Int**Default:** 2048

Stack size of the ARM64, MIPS64 and PPC64 simulator in kBytes (default is 2 MB).

**--single-threaded**

Disable the use of background tasks.

**--stack-size**

**Type:** Int

**Default:** 984

Default size of stack region v8 is allowed to use (in kBytes).

**--stack-trace-limit**

**Type:** Int

**Default:** 10

Number of stack frames to capture.

**--stack-trace-on-illegal**

Print stack trace when an illegal exception is thrown.

**--startup-blob**

**Type:** String

**Default:** NULL

Write V8 startup blob file. (mksnapshot only).

**--startup-src**

**Type:** String

**Default:** NULL

Write V8 startup as C++ src. (mksnapshot only).

**--stop-sim-at**

**Type:** Int

**Default:** 0

Simulator stop after X number of instructions.

**--stress-compaction**

Stress the GC compactor to flush out bugs (implies `--force-marking-deque-over-flows`).

**--stress-compaction-random**

Stress GC compaction by selecting random percent of pages as evacuation candidates. It overrides `--stress-compaction`.

**--stress-flush-bytecode**

Stress bytecode flushing.

**--stress-gc-during-compilation**

Simulate GC/compiler thread race related to <https://crbug.com/v8/8520>.

**--stress-incremental-marking**

Force incremental marking for small heaps and run it more often.

**--stress-inline**

Set high thresholds for inlining to inline as much as possible.

**--stress-lazy-source-positions**

Collect lazy source positions immediately after lazy compilation.

**--stress-marking**

**Type:** Int

**Default:** 0

Force marking at random points between 0 and *X* (inclusive) percent of the regular marking start limit.

**--stress-runs**

**Type:** Int

**Default:** 0

Number of stress runs.

**--stress-sampling-allocation-profiler**

**Type:** Int

**Default:** 0

Enable sampling allocation profiler with *X* as a sample interval.

**--stress-scavenge**

**Type:** Int

**Default:** 0

Force scavenge at random points between 0 and *X* (inclusive) percent of the new space capacity.

**--stress-validate-asm**

Try to validate everything as asm.js.

**--stress-wasm-code-gc**

Stress-test garbage collection of WASM code.

**--suppress-asm-messages**

Don't emit asm.js related messages (for golden file testing).

**--target-arch**

**Type:** String

**Default:** NULL

The `mksnapshot` target architecture. (`mksnapshot` only).

**--target-os****Type:** String**Default:** NULL

The mksnapshot target OS. (mksnapshot only).

**--test-small-max-function-context-stub-size**

Enable testing the function context size overflow path by making the maximum size smaller.

**--testing-float-flag****Type:** Float**Default:** 2.5

Float-flag.

**--testing-int-flag****Type:** Int**Default:** 13

Testing\_int\_flag.

**--testing-maybe-bool-flag****Type:** maybe\_bool**Default:** unset

Testing\_maybe\_bool\_flag.

**--testing-prng-seed****Type:** Int**Default:** 42

Seed used for threading test randomness.

**--testing-string-flag****Type:** String**Default:** "Hello, world!"

String-flag.

**--no-thin-strings**

Disable ThinString support.

**--trace**

Trace function calls.

**--trace-all-uses**

Trace all use positions.

**--trace-allocation-stack-interval****Type:** Int**Default:** -1

Print stack trace after  $N$  free-list allocations.

**--trace-allocations-origins**

Show statistics about the origins of allocations. Combine with `--no-inline-new` to track allocations from generated code.

**--trace-asm-parser**

Verbose logging of asm.js parse failures.

**--trace-asm-scanner**

Log tokens encountered by asm.js scanner.

**--trace-asm-time**

Log asm.js timing info to the console.

**--trace-block-coverage**

Trace collected block coverage information.

**--trace-compiler-dispatcher**

Trace compiler dispatcher activity.

**--trace-concurrent-marking**

Trace concurrent marking.

**--trace-concurrent-recompilation**

Track concurrent recompilation.

**--trace-deopt**

Trace optimize function deoptimization.

**--trace-detached-contexts**

Trace native contexts that are expected to be garbage collected.

**--trace-duplicate-threshold-kb****Type:** Int**Default:** 0

Print duplicate objects in the heap if their size is more than given threshold.

**--trace-environment-liveness**

Trace liveness of local variable slots.

**--trace-evacuation**

Report evacuation statistics.

- trace-evacuation-candidates**  
Show statistics about the pages evacuation by the compaction.
- trace-file-names**  
Include file names in trace-opt/trace-deopt output.
- trace-for-in-enumerate**  
Trace for-in enumerate slow-paths.
- trace-fragmentation**  
Report fragmentation for old space.
- trace-fragmentation-verbose**  
Report fragmentation for old space (detailed).
- trace-gc**  
Print one trace line following each garbage collection.
- trace-gc-freelists**  
Print details of each freelist before and after each major garbage collection.
- trace-gc-freelists-verbose**  
Print details of freelists of each page before and after each major garbage collection.
- trace-gc-ignore-scavenger**  
Do not print trace line after scavenger collection.
- trace-gc-nvp**  
Print one detailed trace line in name=value format after each garbage collection.
- trace-gc-object-stats**  
Trace object counts and memory usage.
- trace-gc-verbose**  
Print more details following each garbage collection.
- trace-generalization**  
Trace map generalization.
- trace-heap-broker**  
Trace the heap broker (reports on missing data only).
- trace-heap-broker-verbose**  
Trace the heap broker verbosely (all reports).
- trace-ic**  
Trace inline cache state transitions for tools/ic-processor.

**--trace-idle-notification**

Print one trace line following each idle notification.

**--trace-idle-notification-verbose**

Print the heap state used by the idle notification.

**--trace-ignition-codegen**

Trace the codegen of ignition interpreter bytecode handlers.

**--trace-ignition-dispatches**

Traces the dispatches to bytecode handlers by the ignition interpreter.

**--trace-ignition-dispatches-output-file**

**Type:** String

**Default:** NULL

The file to which the bytecode handler dispatch table is written (by default, the table is not written to a file).

**--trace-incremental-marking**

Trace progress of the incremental marking.

**--trace-maps**

Trace map creation.

**--no-trace-maps-details**

Don't log map details.

**--trace-migration**

Trace object migration.

**--trace-minor-mc-parallel-marking**

Trace parallel marking for the young generation.

**--trace-mutator-utilization**

Print mutator utilisation, allocation speed, GC speed.

**--trace-opt**

Trace lazy optimization.

**--trace-opt-stats**

Trace lazy optimization statistics.

**--trace-opt-verbose**

Extra verbose compilation tracing.

**--trace-osr**

Trace on-stack replacement.

- trace-parallel-scavenge**  
Trace parallel scavenge.
- trace-pretenuing**  
Trace pretenuing decisions of HAllocate instructions.
- trace-pretenuing-statistics**  
Trace allocation site pretenuing statistics.
- trace-protector-invalidations**  
Trace protector cell invalidations.
- trace-prototype-users**  
Trace updates to prototype user tracking.
- trace-rail**  
Trace RAIL mode.
- trace-representation**  
Trace representation types.
- trace-serializer**  
Print code serializer trace.
- trace-side-effect-free-debug-evaluate**  
Print debug messages for side-effect-free debug-evaluate for testing.
- trace-sim**  
Trace simulator execution.
- trace-sim-messages**  
Trace simulator debug messages. Implied by `--trace-sim`.
- trace-store-elimination**  
Trace store elimination.
- trace-stress-marking**  
Trace stress marking progress.
- trace-stress-scavenge**  
Trace stress scavenge progress.
- trace-track-allocation-sites**  
Trace the tracking of allocation sites.
- trace-turbo**  
Trace generated TurboFan IR.

- trace-turbo-alloc**  
Trace TurboFan's register allocator.
- trace-turbo-ceq**  
Trace TurboFan's control equivalence.
- trace-turbo-cfg-file**  
**Type:** String  
**Default:** NULL  
  
Trace turbo cfg graph (for C1 visualizer) to a given file name.
- trace-turbo-filter**  
**Type:** String  
**Default:** "\*"   
  
Filter for tracing turbofan compilation.
- trace-turbo-graph**  
Trace generated TurboFan graphs.
- trace-turbo-inlining**  
Trace TurboFan inlining.
- trace-turbo-jt**  
Trace TurboFan's jump threading.
- trace-turbo-load-elimination**  
Trace TurboFan load elimination.
- trace-turbo-loop**  
Trace TurboFan's loop optimizations.
- trace-turbo-path**  
**Type:** String  
**Default:** NULL  
  
Directory to dump generated TurboFan IR to.
- trace-turbo-reduction**  
Trace TurboFan's various reducers.
- trace-turbo-scheduled**  
Trace TurboFan IR with schedule.
- trace-turbo-scheduler**  
Trace TurboFan's scheduler.

- trace-turbo-trimming**  
Trace TurboFan's graph trimmer.
- no-trace-turbo-types**  
Don't trace TurboFan's types.
- trace-unmapper**  
Trace the unmapping.
- trace-verify-csa**  
Trace code stubs verification.
- trace-wasm-ast-end**  
Type: Int  
Default: 0  
  
End function for WASM AST trace (exclusive).
- trace-wasm-ast-start**  
Type: Int  
Default: 0  
  
Start function for WASM AST trace (inclusive).
- trace-wasm-code-gc**  
Trace garbage collection of WASM code.
- trace-wasm-memory**  
Print all memory updates performed in WASM code.
- trace-wasm-serialization**  
Trace serialization/deserialization.
- trace-zone-stats**  
Trace zone memory usage.
- no-track-computed-fields**  
Don't track computed boilerplate fields.
- no-track-detached-contexts**  
Don't track native contexts that are expected to be garbage collected.
- no-track-double-fields**  
Don't track fields with double values.
- no-track-field-types**  
Don't track field types.

- no-track-fields**  
Don't track fields with only SMI values.
- track-gc-object-stats**  
Track object counts and memory usage.
- no-track-heap-object-fields**  
Don't track fields with heap values.
- track-retaining-path**  
Enable support for tracking retaining path.
- no-turbo-allocation-folding**  
Disable TurboFan allocation folding.
- no-turbo-cf-optimization**  
Don't optimize control flow in TurboFan.
- turbo-control-flow-aware-allocation**  
Consider control flow while allocating registers.
- no-turbo-escape**  
Disable escape analysis.
- turbo-filter**  
**Type:** String  
**Default:** "\*"   
  
Optimization filter for TurboFan compiler.
- no-turbo-inline-array-builtins**  
Don't inline array builtins in TurboFan code.
- no-turbo-inlining**  
Disable inlining in TurboFan.
- turbo-instruction-scheduling**  
Enable instruction scheduling in TurboFan.
- no-turbo-jt**  
Disable jump threading in TurboFan.
- no-turbo-load-elimination**  
Disable load elimination in TurboFan.
- no-turbo-loop-peeling**  
Disable TurboFan loop peeling.

- no-turbo-loop-rotation**  
Disable TurboFan loop rotation.
- no-turbo-loop-variable**  
Disable TurboFan loop variable optimisation.
- no-turbo-move-optimization**  
Don't optimize gap moves in TurboFan.
- turbo-profiling**  
Enable profiling in TurboFan.
- no-turbo-rewrite-far-jumps**  
Don't rewrite far to near jumps (ia32,x64).
- turbo-sp-frame-access**  
Use stack pointer-relative access to frame wherever possible.
- no-turbo-splitting**  
Don't split nodes during scheduling in TurboFan.
- turbo-stats**  
Print TurboFan statistics.
- turbo-stats-nvp**  
Print TurboFan statistics in machine-readable format.
- turbo-stats-wasm**  
Print TurboFan statistics of WASM compilations.
- no-turbo-store-elimination**  
Disable store-store elimination in TurboFan.
- turbo-stress-instruction-scheduling**  
Randomly schedule instructions to stress dependency tracking.
- turbo-verify**  
Verify TurboFan graphs at each phase.
- turbo-verify-allocation**  
Verify register allocation in TurboFan.
- turbo-verify-machine-graph**  
**Type:** String  
**Default:** NULL  
  
Verify TurboFan machine graph before instruction selection.

**--no-unbox-double-arrays**

Don't automatically unbox arrays of doubles.

**--untrusted-code-mitigations**

Enable mitigations for executing untrusted code.

**--use-external-strings**

Use external strings for source code.

**--no-use-ic**

Don't use inline caching.

**--no-use-idle-notification**

Don't use idle notification to reduce memory footprint.

**--no-use-marking-progress-bar**

Don't use a progress bar to scan large objects in increments when incremental marking is active.

**--no-use-osr**

Don't use on-stack replacement.

**--use-strict**

Enforce strict mode.

**--no-use-verbose-printer**

Disable verbose printing.

**--v8-os-page-size**

**Type:** Int

**Default:** 0

Override OS page size (in KBytes).

**--no-validate-asm**

Don't validate asm.js modules before compiling.

**--no-wasm-async-compilation**

Disable actual asynchronous compilation for `WebAssembly.compile`.  
(<https://mdn.io/WebAssembly.compile>)

**--no-wasm-code-gc**

Disable garbage collection of WASM code.

**--wasm-disable-structured-cloning**

Disable WASM structured cloning.

**--wasm-fuzzer-gen-test**

Generate a test case when running a WASM fuzzer.

- wasm-grow-shared-memory**  
Allow growing shared WebAssembly memory objects.
- wasm-interpret-all**  
Execute all WASM code in the WASM interpreter.
- wasm-lazy-compilation**  
Enable lazy compilation for all WASM modules.
- wasm-lazy-validation**  
Enable lazy validation for lazily-compiled WASM functions.
- no-wasm-math-intrinsics**  
Don't intrinsify some Math imports into WASM.
- wasm-max-code-space**  
**Type:** Uint  
**Default:** 1024  
  
Maximum committed code space for WASM (in MB).
- wasm-max-mem-pages**  
**Type:** Uint  
**Default:** 32767  
  
Maximum number of 64KiB memory pages of a WASM instance.
- wasm-max-table-size**  
**Type:** Uint  
**Default:** 10000000  
  
Maximum table size of a WASM instance.
- wasm-no-bounds-checks**  
Disable bounds checks (performance testing only).
- wasm-no-stack-checks**  
Disable stack checks (performance testing only).
- wasm-num-compilation-tasks**  
**Type:** Int  
**Default:** 10  
  
Number of parallel compilation tasks for WASM.
- wasm-opt**  
Enable WASM optimization.

**--no-wasm-shared-code**

Don't share code underlying a WASM module when it is transferred.

**--no-wasm-shared-engine**

Don't share one WASM engine between all isolates within a process.

**--wasm-staging**

Enable staged WASM features.

**--wasm-test-streaming**

Use streaming compilation instead of async compilation for tests.

**--wasm-tier-mask-for-testing**

**Type:** Int

**Default:** 0

Bitmask of functions to compile with TurboFan instead of Liftoff.

**--no-wasm-tier-up**

Disable WASM baseline compilation and tier up to the optimizing compiler.

**--no-wasm-trap-handler**

Don't use signal handlers to catch out of bounds memory access in WASM (currently Linux x86\_64 only).

**--wasm-write-protect-code-memory**

Write protect code memory on the WASM native heap.

**--no-win64-unwinding-info**

Disable unwinding info for Windows/x64.

**--no-write-protect-code-memory**

Don't write protect code memory.

**--no-young-generation-large-objects**

Don't allocate large objects by default in the young generation large object space.
